

MORE Hints from the Model Garage

A rectangular piece of metal with one end screwed to the sunshield makes a handy clip for your sunglasses. Just slip the case on the clip. Sheet brass or aluminum might be used for the clip. Polished with steel wool, either metal will look good.

An annoying rattle may develop in the passenger seat of late-model Fords which have a small metal plate and limit bolt as shown here. The rattle usually can be eliminated by applying a ready-cut tire patch to the metal to act as a cushion.

A short in the wiring of an old car is sometimes difficult to hunt down because it is intermittent and unpredictable. If that happens to you, try connecting a doorbell in series with the hot lead to the ammeter and systematically bouncing on the bumper and wiggling the wiring until the sound of the bell leads you to the short.

Ignition troubles are sometimes traced to rapid wear of the fiber rubbing block that actuates the ignition points in the distributor. This wear can be reduced by keeping the cam lubricated. A felt oiler held in a sheet-metal clamp is one way of doing this. Apply a drop or two of light oil to the felt.
