

# FOR THE CAR OWNER

MIRROR  
CEMENTED ON

5

DRAWINGS BY STEWART ROUSE

**5 A REAR-VIEW MIRROR** that can be aimed through a wide angle without putting your hand outside the car is afforded by cementing a small pocket-size mirror to the ventilator window at the left of the driver's seat. Set at eye level, it is turned by moving the window in or out. A good china-mending cement will hold it tight.—V.L.

**6 TO LENGTHEN THE LIFE** of rubber floor mats, or to cover up worn spots, a piece cut from an old carpet to the desired size and shape makes a soft, easily cleaned cover for the car floor. Wash the rubber mat clean before attaching the carpet by means of household rubber cement.—H.J.S.

6

**7 REPAINTING THE STRIPES** on your car is greatly simplified by the use of painters' or artists' masking tape. Available with an adhesive back at most hardware stores, the tape is placed on each side of the area to be refinished. Paint the area, letting some paint get on the tape, and remove the tape before the paint is fully dry.—J.R.R.

MASKING  
TAPE

**8 A RESERVE GAS TANK** made from an old-fashioned vacuum tank can easily be attached to the cowl under your engine hood. The supply tube, with a good-size loop to allow for vibration, should be connected to the carburetor side of the fuel-pump line. The tank should be above the float level of your carburetor, and equipped with a petcock for controlling the flow.—E.G.G.
